

Product Name : Ulixertinib
Cat. No. : PC-20222
CAS No. : 869886-67-9
Molecular Formula : C₂₁H₂₂Cl₂N₄O₂
Molecular Weight : 433.33
Target : ERK
Solubility : 10 mM in DMSO

Biological Activity

BVD-523 (Ulixertinib) is a potent, selective, reversible, ATP-competitive **ERK1/2** inhibitor with K_i of 0.3/0.04 nM, respectively.

BVD-523 demonstrated excellent ERK1/2 kinase selectivity based on biochemical counter-screens against 75 kinases. BVD-523 inhibits cellular proliferation and enhances caspase-3/7 activity in vitro while demonstrating substrate inhibition despite increased ERK1/2 phosphorylation.

BVD-523 (25-100 mg/kg, PO, BID) demonstrates in vivo antitumor activity in BRAFV600E-mutant cancer cell line (A375 cell line) xenograft models, and dose-dependent antitumor activity in KRASG12C-mutant pancreatic cell line xenograft model, MIAPaCa2.

BVD-523 yielded synergistic antiproliferative effects in a BRAFV600E-mutant melanoma cell line xenograft model when used in combination with BRAF inhibition.
