

Product Name : JH295
Cat. No. : PC-20309
CAS No. : 1311143-71-1
Molecular Formula : C₁₈H₁₆N₄O₂
Molecular Weight : 320.35
Target : Hec1/Nek2
Solubility : 10 mM in DMSO

Biological Activity

JH295 (JH-295) is a potent, selective and irreversible **Nek2** kinase inhibitor with IC₅₀ of 770 nM, inhibits Nek2 via alkylation of residue Cys22, does not inhibit Cdk1/CycB (IC₅₀>20 uM).

JH295 selectively and irreversibly inhibits cellular Nek2 without affecting the mitotic kinases, Cdk1, Aurora B, or Plk1, does not perturb bipolar spindle assembly or the spindle assembly checkpoint.

JH295 inhibits cellular Nek2 in a Cys22-dependent manner, inhibits WT Nek2 in cells with IC₅₀ of 1.6 uM in IP kinase assays, shows little effect on the C22V mutant.

JH295 does not perturb bipolar spindle assembly or chromosome congression.
