

Product Name : Lefamulin acetate
Cat. No. : PC-22409
CAS No. : 1350636-82-6
Molecular Formula : C₃₀H₄₉NO₇S
Molecular Weight : 567.78
Target : Bacterial
Solubility : 10 mM in DMSO

Biological Activity

Lefamulin (BC-3781) acetate is a pleuromutilin class of **antimicrobial** agent, inhibits bacterial protein synthesis by selectively binding to the **peptidyl transferase** center of the bacterial ribosome, prevents the correct positioning of the 3'-CCA ends of tRNAs for peptide transfer.

Lefamulin (BC-3781) exhibits a log-normal MIC distribution against the population of *S. pneumoniae*, with modal MIC, MIC₅₀, and MIC₉₀ results of 0.12, 0.12, and 0.25 µg/ml, respectively.

Lefamulin (BC-3781) exhibits potent antibacterial activity against the most important respiratory and skin pathogens, including *Streptococcus* spp. and *Staphylococcus* spp., fastidious Gram-negative organisms, such as *Haemophilus influenzae*, and atypical respiratory pathogens, including *Mycoplasma pneumoniae*, *Chlamydia pneumoniae*, and *Legionella pneumophila*.
