
Product Name	: KS-133 TFA	Ac-CPPYLPKYLCDLI-NH2 (cyclized C1-C10, K7-D11) TFA salt
Cat. No.	: PC-27304	
CAS No.	:	
Molecular Formula	: C ₇₇ H ₁₁₂ F ₃ N ₁₅ O ₁₉ S ₂	
Molecular Weight	: 1672.93	
Target	: Vasoactive intestinal peptide receptor (VIPR)	
Solubility	: 10 mM in DMSO	

Biological Activity

KS-133 TFA (KS133) is a potent, selective bicyclic peptide antagonist of vasoactive intestinal peptide receptor 2 (VIPR2) with IC₅₀ of 24.8 nM in Ca influx assays.

KS-133 does not antagonize VIP-VIPR1 or PACAP-PAC1 signaling pathways up to 5 μM.

KS-133 antagonized VIP-VIPR2 signaling pathway in a peptide concentration-dependent manner (IC₅₀=500 nM) in cAMP assays, without VIPR2 agonist activity up to 5 μM.

The selective VIPR2 agonist BAY 55-9837 (20 μg/mouse) significantly increased phosphorylated CREB in the prefrontal cortex, KS-133 (20 nmol/mouse) coadministration blocked this effect.

KS-133 exhibited in vivo pharmacological efficacies in a mouse model of psychiatric disorders through early postnatal activation of VIPR2.

KS-133 dose-dependently inhibited VIP-induced cell migration in VIPR2-overexpressing MDA-MB-231 cells.
