Biological Activity

NRL-1049 dihydrochloride ((R)-BA-1049) is a potent, orally-available ROCK2-selective inhibitor with IC₅₀ of 0.24 μM, 16-fold selectivity over ROCK-1.

Neither BA-1049 nor the metabolite inhibits PKA or PKC at physiological ATP concentrations.

BA-1049 is a promising drug candidate to reduce lesion growth and hemorrhage in both CCM1 and CCM3 models of cavernous angioma (CA).
