

**Product Name** : QCA570  
**Cat. No.** : PC-35399  
**CAS No.** : 2207569-08-0  
**Molecular Formula** : C<sub>39</sub>H<sub>33</sub>N<sub>7</sub>O<sub>4</sub>S  
**Molecular Weight** : 695.798  
**Target** : PROTAC  
**Solubility** : 10 mM in DMSO

## Biological Activity

QCA570 is a highly potent efficacious **BET degrader** (PROTAC) with IC<sub>50</sub> of 10 nM (BRD4 BD1).

QCA570 effectively induces degradation of BET proteins and inhibits cell growth in human acute leukemia cell lines at pM level; inhibits cell growth in MV4;11, MOLM-13, and RS4;11 cell lines with IC<sub>50</sub> values of 8.3, 62, and 32 pM, respectively.

QCA570 is >10-times more potent than ZBC260 (BETd-260, Cat# PC-60102) in the MV4;11 and MOLM-13 cell lines.

QCA570 (10-30 pM) is very effective in reducing the levels of c-Myc protein in the RS4;11 cell line and the MV4;11 cell line.

QCA570 causes complete and durable tumor regression in leukemia xenograft models in mice.
