

Product Name : SGC-GAK-1
Cat. No. : PC-35852
CAS No. : 2226517-76-4
Molecular Formula : C₁₈H₁₇BrN₂O₃
Molecular Weight : 389.249
Target : Other Targets
Solubility :

1. Asquith CRM, et al. *J Med Chem.* 2019 Feb 15.

Biological Activity

SGC-GAK-1 (GAK inhibitor 1) is a potent, selective, and cell-active inhibitor of cyclin **G-associated kinase (GAK)** with K_i of 3.2 nM, 16,000-fold selectivity over NAK; SGC-GAK-1 is highly selective in an in vitro kinome-wide screen, but cellular engagement assays defined RIPK2 as a collateral target; shows high affinity for GAK in cells in cellular target engagement assays (IC_{50} =120 nM), 3-fold selectivity over RIPK2 in cells (IC_{50} =360 nM); robustly blocked growth of 22Rv1 and LNCaP cell lines (Viability IC_{50} =0.17 and 0.65 μ M) that express AR splice variants associated with poor clinical prognosis, treatment of 22Rv1 cells with led to PARP cleavage, a marker of cells undergoing apoptosis, and an increase in phosphorylated histone H3 Ser10, as had been observed in with GAK targeting siRNA.
