

Product Name : KYP-2047
Cat. No. : PC-38478
CAS No. : 796874-99-2
Molecular Formula : C₂₀H₂₅N₃O₂
Molecular Weight : 339.44
Target : Other Targets
Solubility : 10 mM in DMSO

Biological Activity

KYP-2047 is a high affinity **prolyl oligopeptidase** (PREP) inhibitor with K_i of 0.023 nM, reduces α-synuclein protein levels and aggregates in cellular and animal models of PD.

KYP-2047 significantly reduced the number of cells with α-synuclein inclusions while abolishing the colocalization of α-synuclein and PREP.

KYP-2047 significantly reduced the amount of aggregated α-synuclein, and it had beneficial effects on cell viability.

KYP-2047 reduced the amount of α-synuclein immunoreactivity and soluble α-synuclein protein in the brain in animal models of Parkinson's disease.

KYP-2047 also reduced tongue squamous cell-carcinoma (TSCC) cell viability at 50 and 100 μM, significantly reduced tumor burden and tumor weight, decreasing also angiogenesis markers VEGF and eNOS.
