## **Biological Activity**

L82-G17 is a selective, uncompetitive inhibitor of **DNA ligase I**, inhibits the third step of the ligation reaction, phosphodiester bond formation.

L82-G17 did not inhibit LigIV.

L82-G17 exhibited increased activity against and selectivity for LigI compared with L82.

Cells lacking nuclear LigIII $\alpha$ , which can substitute for LigI in DNA replication, were also more sensitive to L82-G17 than isogenic parental cells.
