

**Product Name** : Synucleozid hydrochloride  
**Cat. No.** : PC-38593  
**CAS No.** : 2741856-68-6  
**Molecular Formula** : C<sub>22</sub>H<sub>21</sub>ClN<sub>6</sub>  
**Molecular Weight** : 404.902  
**Target** : Other Targets  
**Solubility** : 10 mM in DMSO

## Biological Activity

Synucleozid hydrochloride (NSC 377363) is a small molecule that targets the IRE structure and inhibits SNCA gene translation in cells, directly targets the  $\alpha$ -synuclein mRNA 5'UTR at the designed site.

Synucleozid decreases 2-AP emission with an EC<sub>50</sub> of 2.7  $\mu$ M.

Synucleozid binds and stabilizes the SNCA IRE in cells at a specific structural element.

Synucleozid selectively reduces  $\alpha$ -synuclein protein levels by decreasing the amount of SNCA mRNA loaded into polysomes, mechanistically providing a cytoprotective effect in cells.
