### Biological Activity

GNE-9605 is a highly potent, selective, brain penetrant **LRRK2** inhibitor with K<sub>i</sub> of 2 nM, pLRRK2 IC<sub>50</sub> of 19 nM. GNE-9605 displays excellent selectivity against 178-membered Invitrogen kinase panel, as well as a representative panel of receptors and ion channels. GNE-9605 demonstrates robust concentration-dependent inhibition of LRRK2 Ser1292 autophosphorylation (IC<sub>50</sub>=20 nM) in BAC transgenic mice expressing human LRRK2 protein with the G2019S Parkinson's disease mutation.
