

Product Name : GSK2194069
Cat. No. : PC-42976
CAS No. : 1332331-08-4
Molecular Formula : C₂₅H₂₄N₄O₃
Molecular Weight : 428.4831
Target : Fatty Acid Synthase
Solubility : 10 mM in DMSO

Biological Activity

GSK2194069 is a potent and specific inhibitor of the β -ketoacyl reductase (KR) activity of human **fatty acid synthase** (hFAS, FASN) with IC₅₀ of 7.7 nM (CoA release).

GSK2194069 shows an IC₅₀ of 29 nM versus hFAS with acetoacetyl-CoA as the substrate, but shows little or no inhibition with β -hydroxybutyrylCoA and crotonyl-CoA (IC₅₀ >1,000 nM), also does not inhibit the partial activities of the KS domain. GSK2194069 decreases phosphatidylcholine levels in A549 cells with IC₅₀ of 15.5 nM without effect on FAS protein levels, reduced A549 cell growth with EC₅₀ of 15 nM.
