

Product Name : Midodrine
Cat. No. : PC-43176
CAS No. : 42794-76-3
Molecular Formula : C₁₂H₁₈N₂O₄
Molecular Weight : 254.2823
Target : Adrenergic Receptor
Solubility : 10 mM in DMSO

Biological Activity

Midodrine is a selective α ₁-adrenoceptor agonist that acts as a vasopressor/antihypotensive agent for the treatment of dysautonomia and orthostatic hypotension; activates the alpha-adrenergic receptors of the arteriolar and venous vasculature, producing an increase in vascular tone and elevation of blood pressure; does not stimulate cardiac beta-adrenergic receptors, and diffuses poorly across the blood-brain barrier.

Hypertension
Approved
