

**Product Name** : DCC-2036  
**Cat. No.** : PC-43334  
**CAS No.** : 1020172-07-9  
**Molecular Formula** : C<sub>30</sub>H<sub>28</sub>FN<sub>7</sub>O<sub>3</sub>  
**Molecular Weight** : 553.5869  
**Target** : Bcr-Abl  
**Solubility** : 10 mM in DMSO

## Biological Activity

DCC-2036 (Rebastinib) is a highly potent, non-ATP-competitive BCR-ABL1 inhibitor with IC<sub>50</sub> of 0.8 and 4 nM for native ABL1 and gatekeeper mutant ABL1 T315I, respectively; also inhibits the SRC family kinases SRC, LYN, FGR, and HCK, and the receptor TKs KDR, FLT3, and TIE2 (IC<sub>50</sub>s=2-40 nM), but spares c-KIT (IC<sub>50</sub>=480 nM); potently inhibits unphosphorylated and phosphorylated ABL1 native with IC<sub>50</sub> of 0.75 and 2 nM, potently inhibits unphosphorylated and phosphorylated ABL1 T315I with IC<sub>50</sub> of 5 and 4 nM, also potently inhibits ABL1 H396P (IC<sub>50</sub>=1.4 nM); inhibits cellular proliferation of Ba/F3 cells expressing native or T315I mutant with IC<sub>50</sub> of 5.4 and 13 nM, also inhibits proliferation of several common TKI-resistant mutants of BCR-ABL1, including G250E, Q252H, Y235F, E255K, V299L, F317L, and M351T with IC<sub>50</sub> of 6-150 nM; prolongs survival in mouse Ba/F3 cell allograft models.

Blood Cancer

Phase 2 Clinical
