Biological Activity

SR9011 hydrochloride is a potent, small molecule nuclear receptors **REV-ERB α / β** agonist with IC₅₀ of 670/800 nM, respectively.

SR9011 potently and efficaciously suppresses transcription in a cotransfection assay using full-length REV-ERB α along with a luciferase reporter driven by the Bmal1 promoter (IC₅₀=710 nM).

SR9011 decreases obesity by reducing fat mass and markedly improves dyslipidaemia and hyperglycaemia in diet-induced obese mice.
