

Product Name : RSVA405
Cat. No. : PC-47019
CAS No. : 140405-36-3
Molecular Formula : C₁₇H₂₀N₄O₂
Molecular Weight : 312.37
Target : AMPK
Solubility : 10 mM in DMSO

Biological Activity

RSVA405 is a small-molecule activator of AMPK, facilitates CaMKK β -dependent activation of AMPK, inhibits mTOR and promotes autophagy to increase A β degradation by the lysosomal system with EC₅₀ of 1 μ M.

RSVA405 inhibited 3T3-L1 adipocyte differentiation by interfering with mitotic clonal expansion during preadipocyte proliferation with IC₅₀ of 0.5 μ M.

RSVA405 prevented the adipogenesis-dependent transcriptional changes of multiple gene products involved in the adipogenic process, including PPAR γ , CCAAT/enhancer-binding protein α (C/EBP α), fatty acid synthase, fatty acid binding protein 4 (aP2), RANTES or resistin.

RSVA405 (20 and 100 mg/kg/d, oral) significantly reduced the body weight gain of mice fed a high-fat diet.

RSVA405 potently inhibited both constitutive and stimulated STAT3 activity in HEK293 cells and LPS-stimulated RAW 264.7 macrophages, respectively.
