

**Product Name** : CD147 inhibitor AC-73  
**Cat. No.** : PC-49041  
**CAS No.** : 775294-71-8  
**Molecular Formula** : C<sub>21</sub>H<sub>21</sub>NO<sub>2</sub>  
**Molecular Weight** : 319.4  
**Target** : Other Targets  
**Solubility** : 10 mM in DMSO

### Biological Activity

AC-73 is a potent, specific small molecule inhibitor of **CD147** (Response Units=63, SPR assays), AC-73 disrupts CD147 dimerization and inhibits the motility and invasion of hepatocellular carcinoma cells.

AC-73 significantly decreased the migration ability of SMMC-7721 cells in a dose-dependent manner in in vitro scratch assays, decreased the invasion of HCC cells with IC<sub>50</sub> of 10.19 μM for SMMC-7721 and 7.16 μM for Huh-7, respectively.

AC-73 inhibits the invasion of HCC cells by reducing MMP-2 production through blocking CD147-stimulated MAPK/STAT3 signaling.

AC-73 (25 mg/kg, 50 mg/kg, intrahepatic injection) reduced tumor metastasis by affecting the CD147/ERK1/2/STAT3 pathways in orthotopic HCC transplant nude mouse model, with low toxicity and well tolerance in nude mice.

AC-73 likely binds to the dimer interface of CD147, the N-terminal IgC2 domain of CD147.
