

Product Name : NB-598 maleate
Cat. No. : PC-49756
CAS No. : 155294-62-5
Molecular Formula : C₃₁H₃₅NO₅S₂
Molecular Weight : 565.74
Target : Other Targets
Solubility : 10 mM in DMSO

Biological Activity

NB-598 (NB598) is a potent competitive inhibitor of **squalene epoxidase** (SQLE, SE, squalene monooxygenase) with IC₅₀ of 4.4 nM (rat SE), inhibits microsomal squalene epoxidase from dog liver and Hep G2 cells with IC₅₀ of 2.0 and 0.75 nM, respectively.

NB-598 also strongly inhibited cholesterol synthesis from [14C]acetate in Hep G2 cells with an IC₅₀ value of 3.4 nM.

NB-598 inhibited cholesterol synthesis from [14C]acetate dose dependently in Hep G2 cells and increased the intracellular radioactivity of squalene.

A single oral administration of NB-598 inhibited cholesterol synthesis from [14C]acetate in rats.

Multiple oral administration of NB-598 to dogs decreased serum total and low density lipoprotein cholesterol levels and increased serum squalene levels.
