### Biological Activity

GNE-6776 is a novel potent, specific, non-covalent, orally bioavailable **USP7** inhibitor with IC<sub>50</sub> of 1.34 μM. GNE-6776 displays selectivity over USP47 and USP5 (>200 μM). GNE-6776 promotes endogenous MDM2 ubiquitination, stabilized p53 and upregulated p21, induces tumour cell death and enhances cytotoxicity with chemotherapeutic agents. GNE-6776 promotes on-target pathway modulation in human xenografts.
