

Product Name : BAX inhibitor BAI1
Cat. No. : PC-72240
CAS No. : 335165-68-9
Molecular Formula : C₁₉H₂₁Br₂N₃O
Molecular Weight : 467.205
Target : Bcl-2
Solubility : 10 mM in DMSO

Biological Activity

BAX inhibitor BAI1 (BAI1) is a small-molecule allosteric inhibitor of **BAX**, bind directly to BAX and inhibits tBID-induced BAX-mediated membrane permeabilization with IC₅₀ of 3.4 μM.

BAI1 binds to inactive monomeric BAX at a novel allosteric site, allosterically inhibits BIM BH3-mediated BAX activation and oligomerization.

BAI1 selectively inhibited BAX-mediated apoptotic cell death, effectively inhibited TNFα + cyclohexamide mediated-apoptosis monitored by caspase 3/7 activation in a dose-dependent manner (IC₅₀=1.8 μM).
