

Product Name : NBI-74330
Cat. No. : PC-73268
CAS No. : 855527-92-3
Molecular Formula : C₃₂H₂₇F₄N₅O₃
Molecular Weight : 605.58
Target : Chemokine Receptor (CCR and CXCR)
Solubility : 10 mM in DMSO

Biological Activity

NBI-74330 (VUF10472) is a potent, selective CXCR3 chemokine receptor 3 (**CXCR3**) antagonist, inhibits [(125)I]CXCL10 and [(125)I]CXCL11 specific binding with K_i of 1.5 and 2.3 nM, respectively.

NBI-74330 exhibited specific inhibition of functional responses mediated by CXCR3, such as ligand-induced guanosine 5'-O-(3-[(35)S]thio)triphosphate ([35S]GTPγS) binding, calcium mobilization, and cellular chemotaxis (IC₅₀=7-18 nM). NBI-74330 showed no significant inhibition of chemotactic responses to other chemokines and did not inhibit radioligand binding to a panel of nonchemokine G-protein coupled receptors.

NBI-74330 block CXCR3-mediated signaling in peritonitis and diet-induced atherosclerosis, attenuates atherosclerotic plaque formation in LDL receptor-deficient mice.
